Reasons for Allowance

Independent claim 1 recites interconnection of ISDN phones for transferring calls and a limitation for the following:

"in response to a third message over the network from the second telephone requesting transfer of the incoming call, the processor operative to initiate a network transfer of the incoming call to the second telephone, disconnecting the telephone from the incoming call"

The prior art of record teaches interconnection of ISDN phones for transferring calls. The prior art is different because it only cancels call states and not disconnecting the telephone after transferring incoming calls as recited in the limitation above.

Independent claim 9 recites interconnection of ISDN phones for transferring voice message indication and a limitation for the following:

"in response to a message waiting activation signal over the network, the processor operative to construct a coded message indicating a voice mail message on the network and operative to transmit the coded message to a second telephone"

The prior art of record teaches ISDN network interconnecting telephones. The prior art of record is different because it does not teach a telephone constructing a coded message indicating a voice mail message as recited in the limitation.

New search updates revealed no other prior art which teaches the limitations in the context of the claims. Therefore, Claims 1-9 are indicated allowable.
